

Docket No. AUS990880US1

CLAIMS:

What is claimed is:

- Sub
B3*
- 5 1. A method for processing enveloped data objects in a data processing system comprising a display, the method comprising the computer-implemented steps of:
 presenting an enveloped data object; and
 modifying the enveloped data object through
 processing of user actions within a graphical user
10 interface.
 - 15 2. The method of claim 1 wherein the enveloped data object is formatted according to PKCS (Private Key Cryptography Standard) standards.
 - 20 3. The method of claim 1 wherein the step of presenting the enveloped data object further comprises:
 obtaining an enveloped data object, wherein the enveloped data object comprises a content data object and
25 at least one content encryption key object;
 determining data objects contained with the enveloped data object;
 displaying the enveloped data object, wherein data objects contained within the enveloped data object are represented by graphical objects;
 determining logical associations between data objects contained within the enveloped data object; and
 displaying visual indicators between graphical objects, wherein the visual indicators represent logical
30 associations between data objects contained within the enveloped data object.

Docket No. AUS990880US1

4. The method of claim 3 wherein the step of modifying the enveloped data object further comprises:
selecting a graphical object representing a data
object contained within the enveloped data object;
displaying data values of the selected data object;
editing the data values of the selected data object;
and
saving the data values of the selected data object
in the enveloped data object.
5. The method of claim 4 further comprising:
identifying a data type of the data object
represented by the selected graphical object, wherein the
selected data object is a content data object; and
identifying a default editor for displaying the
selected data object according to the identified data
type of the data object represented by the selected
graphical object.
6. The method of claim 4 wherein the step of modifying the enveloped data object further comprises:
selecting a graphical object representing a data
object contained within the enveloped data object;
receiving a user action on the selected graphical
object representing a deletion request; and
deleting from the enveloped data object the data
object represented by the selected graphical request.
7. The method of claim 6 further comprising:
determining whether the selected graphical object

Docket No. AUS990880US1

- represents a certificate object;
- in response to a determination that the selected graphical object represents a certificate object:
- determining whether the certificate object is logically associated with a different certificate object embedded within the enveloped data object;
- and
- in response to a determination that the certificate object is logically associated with a different certificate object embedded within the enveloped data object, removing a visual indicator representing a logical association between the certificate object and the different certificate object;
- determining whether the certificate object is logically associated with a recipient information object;
- in response to a determination that the certificate object is logically associated with a recipient information object:
- deleting the recipient information object; and
- removing a visual indicator representing a logical association between the certificate object and the recipient information object.
8. The method of claim 6 further comprising:
- determining whether the selected graphical object represents a certificate revocation list object;
- in response to a determination that the selected graphical object represents a certificate revocation list object:

Docket No. AUS990880US1

determining whether the certificate revocation list object is logically associated with a certificate object; and

5 in response to a determination that the certificate revocation list object is logically associated with a certificate object, removing a visual indicator representing a logical association between the certificate object and the certificate revocation list object.

10 9. The method of claim 3 further comprising:
receiving a user request to send the enveloped data object;

15 obtaining one or more e-mail addresses to which to send the enveloped data object; and
in response to a determination that the enveloped data object contains a recipient information object, sending an e-mail message comprising the enveloped data object to the one or more e-mail addresses.

20 10. The method of claim 3 further comprising:
receiving a user request to export the enveloped data object;
obtaining a user-specified file name; and
25 storing the enveloped data object in DER-encoded format in the user-specified file.

11. The method of claim 3 further comprising:
receiving a user request to import the enveloped data object;
obtaining a user-specified file name;

Docket No. AUS990880US1

importing the enveloped data object in DER-encoded format from the user-specified file; and

populating the graphical objects representing data object contained within the enveloped data object.

5

12. The method of claim 1 further comprising:

receiving a user request to add a content data object to the enveloped data object;

10 determining whether an encryption key data object is embedded in the enveloped data object;

in response to a determination that an encryption key data object is not embedded in the enveloped data object:

15 storing the content data object within the enveloped data object;

displaying a graphical object representing the content data object, wherein the graphical object indicates that the content data object is embedded within the enveloped data object;

20 in response to a determination that an encryption key data object is embedded in the enveloped data object:

generating an encrypted content data object within the enveloped data object, wherein the encrypted content data object comprises encrypted content for the content data object, a content type identifier for the encrypted content, and an encryption algorithm identifier;

25 enabling a decrypt button for decrypting the encrypted content data object; and

30 displaying a graphical object representing the encrypted content data object, wherein the graphical

Docket No. AUS990880US1

- object indicates that the encrypted content data object is embedded within the enveloped data object.
13. The method of claim 12 further comprising:
5 dragging and dropping a graphical object representing the content data object on a graphical object representing the enveloped data object.
14. The method of claim 1 further comprising:
10 receiving a user request to add a certificate object to the enveloped data object;
storing the certificate object in the enveloped data object; and
displaying a graphical object representing the
15 certificate object, wherein the graphical object indicates that the certificate object is embedded within the enveloped data object.
15. The method of claim 14 further comprising:
20 determining whether the certificate object is logically associated with a different certificate object embedded within the enveloped data object; and
in response to a determination that the certificate object is logically associated with a different
25 certificate object embedded within the enveloped data object, displaying a visual indicator representing a logical association between the certificate object and the different certificate object.
- 30 16. The method of claim 14 further comprising:
determining whether an encryption key data object is

Docket No. AUS990880US1

- embedded in the enveloped data object;
in response to a determination that an encryption
key data object is embedded in the enveloped data object,
receiving user input requesting generation of a recipient
5 information object;
generating a recipient information object;
storing the recipient information object in the
enveloped data object; and
displaying a graphical object representing the
10 recipient information object, wherein the graphical
object indicates that the recipient information object is
embedded within the enveloped data object; and
displaying a visual indicator representing a logical
association between the recipient information object and
15 an associated certificate object.
17. The method of claim 14 further comprising:
dragging and dropping a graphical object
representing the certificate object on a graphical object
20 representing the enveloped data object.
18. The method of claim 1 further comprising:
receiving a user request to add a certificate
revocation list object to the enveloped data object;
25 storing the certificate revocation list object in
the enveloped data object; and
displaying a graphical object representing the
certificate revocation list object, wherein the graphical
object indicates that the certificate revocation list
30 object is embedded within the enveloped data object.

Docket No. AUS990880US1

19. The method of claim 18 further comprising:
determining whether the certificate revocation list
object is logically associated with a certificate object
embedded within the enveloped data object; and
5 in response to a determination that the certificate
revocation list object is logically associated with a
certificate object embedded within the enveloped data
object, displaying a visual indicator representing a
logical association between the certificate revocation
10 list object and the certificate object.
20. The method of claim 18 further comprising:
dragging and dropping a graphical object
representing the certificate revocation list object on a
15 graphical object representing the enveloped data object.
21. The method of claim 3 further comprising:
receiving a user request to encrypt a content data
object embedded in the enveloped data object;
20 generating an encrypted content data object within
the enveloped data object, wherein the encrypted content
data object comprises encrypted content for the content
data object, a content type identifier for the encrypted
content, and an encryption algorithm identifier;
25 enabling a decrypt button for decrypting the
encrypted content data object; and
 displaying a graphical object representing the
encrypted content data object, wherein the graphical
object indicates that the encrypted content data object
30 is embedded within the enveloped data object.

Docket No. AUS990880US1

22. The method of claim 3 further comprising:
receiving a user request to decrypt an encrypted
content data object embedded in the enveloped data
object;
- 5 decrypting the encrypted content data object to a
content data object embedded in the enveloped data
object;
enabling a encrypt button for encrypting the content
data object; and
- 10 displaying a graphical object representing the
content data object, wherein the graphical object
indicates that the content data object is embedded within
the enveloped data object.
- 15 23. The method of claim 3 further comprising:
receiving a user request to select an encryption key
algorithm;
deleting an encryption key embedded in the enveloped
data object; and
- 20 removing the encryption key from recipient
information objects embedded in the enveloped data
object.
- 25 24. A data processing system for processing enveloped
data objects in the data processing system comprising a
display, the data processing system comprising:
presenting means for presenting an enveloped data
object; and
modifying means for modifying the enveloped data
- 30 object through processing of user actions within a
graphical user interface.

Docket No. AUS990880US1

25. The data processing system of claim 24 wherein the enveloped data object is formatted according to PKCS (Private Key Cryptography Standard) standards.

5 26. The data processing system of claim 24 wherein the means for presenting the enveloped data object further comprises:

10 obtaining means for obtaining an enveloped data object, wherein the enveloped data object comprises a content data object and at least one content encryption key object;

15 first determining means for determining data objects contained with the enveloped data object;

20 first displaying means for displaying the enveloped data object, wherein data objects contained within the enveloped data object are represented by graphical objects;

25 second determining means for determining logical associations between data objects contained within the enveloped data object; and

30 second displaying means for displaying visual indicators between graphical objects, wherein the visual indicators represent logical associations between data objects contained within the enveloped data object.

25

27. The data processing system of claim 26 wherein the means for modifying the enveloped data object further comprises:

30 first selecting means for selecting a graphical object representing a data object contained within the enveloped data object;

Docket No. AUS990880US1

third displaying means for displaying data values of the selected data object;

editing means for editing the data values of the selected data object; and

5 saving means for saving the data values of the selected data object in the enveloped data object.

28. The data processing means of claim 27 further comprising:

10 first identifying means for identifying a data type of the data object represented by the selected graphical object, wherein the selected data object is a content data object; and

15 second identifying means for identifying a default editor for displaying the selected data object according to the identified data type of the data object represented by the selected graphical object.

29. The data processing system of claim 27 wherein the
20 means for modifying the enveloped data object further comprises:

second selecting means for selecting a graphical object representing a data object contained within the enveloped data object;

25 first receiving means for receiving a user action on the selected graphical object representing a deletion request; and

first deleting means for deleting from the enveloped data object the data object represented by the selected graphical request.

Docket No. AUS990880US1

30. The data processing system of claim 29 further comprising:

third determining means for determining whether the selected graphical object represents a certificate object;

5

fourth determining means for determining, in response to a determination that the selected graphical object represents a certificate object, whether the certificate object is logically associated with a different certificate object embedded within the enveloped data object;

10

first removing means for removing, in response to a determination that the certificate object is logically associated with a different certificate object embedded

15

within the enveloped data object, a visual indicator representing a logical association between the certificate object and the different certificate object;

fifth determining means for determining whether the certificate object is logically associated with a recipient information object;

20

second deleting means for deleting, in response to a determination that the certificate object is logically associated with a recipient information object, the recipient information object; and

25

second removing means for removing, in response to a determination that the certificate object is logically associated with a recipient information object, a visual indicator representing a logical association between the certificate object and the recipient information object.

30

31. The data processing system of claim 29 further

Docket No. AUS990880US1

comprising:

sixth determining means for determining whether the selected graphical object represents a certificate revocation list object;

5 seventh determining means for determining, in response to a determination that the selected graphical object represents a certificate revocation list object, whether the certificate revocation list object is logically associated with a certificate object; and

10 third removing means for removing, in response to a determination that the certificate revocation list object is logically associated with a certificate object, a visual indicator representing a logical association between the certificate object and the certificate
15 revocation list object.

32. The data processing system of claim 26 further comprising:

20 second receiving means for receiving a user request to send the enveloped data object;

first obtaining means for obtaining one or more e-mail addresses to which to send the enveloped data object; and

25 first sending means for sending, in response to a determination that the enveloped data object contains a recipient information object, an e-mail message comprising the enveloped data object to the one or more e-mail addresses.

30 33. The data processing system of claim 26 further comprising:

Docket No. AUS990880US1

third receiving means for receiving a user request
to export the enveloped data object;

second obtaining means for obtaining a
user-specified file name; and

5 first storing means for storing the enveloped data
object in DER-encoded format in the user-specified file.

34. The data processing system of claim 26 further
comprising:

10 fourth receiving means for receiving a user request
to import the enveloped data object;

third obtaining means for obtaining a user-specified
file name;

15 importing means for importing the enveloped data
object in DER-encoded format from the user-specified
file; and

populating means for populating the graphical
objects representing data object contained within the
enveloped data object.

20

35. The data processing system of claim 24 further
comprising:

fifth receiving means for receiving a user request
to add a content data object to the enveloped data
25 object;

eighth determining means for determining whether an
encryption key data object is embedded in the enveloped
data object;

30 second storing means for storing, in response to a
determination that an encryption key data object is not
embedded in the enveloped data object, the content data

Docket No. AUS990880US1

object within the enveloped data object;

fourth displaying means for displaying, in response to a determination that an encryption key data object is not embedded in the enveloped data object, a graphical

5 object representing the content data object, wherein the graphical object indicates that the content data object is embedded within the enveloped data object;

first generating means for generating, in response to a determination that an encryption key data object is

10 embedded in the enveloped data object, an encrypted content data object within the enveloped data object, wherein the encrypted content data object comprises encrypted content for the content data object, a content type identifier for the encrypted content, and an

15 encryption algorithm identifier;

first enabling means for enabling, in response to a determination that an encryption key data object is embedded in the enveloped data object, a decrypt button for decrypting the encrypted content data object; and

20 fifth displaying means for displaying, in response to a determination that an encryption key data object is embedded in the enveloped data object, a graphical object representing the encrypted content data object, wherein the graphical object indicates that the encrypted content

25 data object is embedded within the enveloped data object.

36. The data processing system of claim 35 further comprising:

first dragging and dropping means for dragging and
30 dropping a graphical object representing the content data object on a graphical object representing the enveloped

CONFIDENTIAL - GOVERNMENT USE ONLY

Docket No. AUS990880US1

data object.

37. The data processing system of claim 24 further comprising:

5 sixth receiving means for receiving a user request to add a certificate object to the enveloped data object; third storing means for storing the certificate object in the enveloped data object; and sixth displaying means for displaying a graphical 10 object representing the certificate object, wherein the graphical object indicates that the certificate object is embedded within the enveloped data object.

38. The data processing system of claim 37 further 15 comprising:

ninth determining means for determining whether the certificate object is logically associated with a different certificate object embedded within the enveloped data object; and

20 seventh displaying means for displaying, in response to a determination that the certificate object is logically associated with a different certificate object embedded within the enveloped data object, a visual indicator representing a logical association between the 25 certificate object and the different certificate object.

39. The data processing system of claim 37 further comprising:

30 tenth determining means for determining whether an encryption key data object is embedded in the enveloped data object;

Docket No. AUS990880US1

receiving means for receiving, in response to a determination that an encryption key data object is embedded in the enveloped data object, user input requesting generation of a recipient information object;

5 second generating means for generating the recipient information object;

third storing means for storing the recipient information object in the enveloped data object; and

10 eighth displaying means for displaying a graphical object representing the recipient information object, wherein the graphical object indicates that the recipient information object is embedded within the enveloped data object; and

ninth displaying means for displaying a visual
15 indicator representing a logical association between the recipient information object and an associated certificate object.

40. The data processing system of claim 37 further
20 comprising:

second dragging and dropping means for dragging and dropping a graphical object representing the certificate object on a graphical object representing the enveloped data object.

25

41. The data processing system of claim 24 further comprising:

seventh receiving means for receiving a user request to add a certificate revocation list object to the
30 enveloped data object;

third storing means for storing the certificate

Docket No. AUS990880US1

revocation list object in the enveloped data object; and
tenth displaying means for displaying a graphical
object representing the certificate revocation list
object, wherein the graphical object indicates that the
5 certificate revocation list object is embedded within the
enveloped data object.

42. The data processing system of claim 41 further
comprising:

10 eleventh determining means for determining whether
the certificate revocation list object is logically
associated with a certificate object embedded within the
enveloped data object; and

15 eleventh displaying means for displaying, in
response to a determination that the certificate
revocation list object is logically associated with a
certificate object embedded within the enveloped data
object, a visual indicator representing a logical
association between the certificate revocation list
20 object and the certificate object.

43. The data processing system of claim 41 further
comprising:

25 third dragging and dropping means for dragging and
dropping a graphical object representing the certificate
revocation list object on a graphical object representing
the enveloped data object.

44. The data processing system of claim 26 further
30 comprising:

eighth receiving means for receiving a user request

Docket No. AUS990880US1

to encrypt a content data object embedded in the enveloped data object;

third generating means for generating an encrypted content data object within the enveloped data object,

5 wherein the encrypted content data object comprises encrypted content for the content data object, a content type identifier for the encrypted content, and an encryption algorithm identifier;

second enabling means for enabling a decrypt button
10 for decrypting the encrypted content data object; and

twelfth displaying means for displaying a graphical object representing the encrypted content data object, wherein the graphical object indicates that the encrypted content data object is embedded within the enveloped data
15 object.

45. The data processing system of claim 26 further comprising:

ninth receiving means for receiving a user request
20 to decrypt an encrypted content data object embedded in the enveloped data object;

decrypting means for decrypting the encrypted content data object to a content data object embedded in the enveloped data object;

25 third enabling means for enabling a encrypt button for encrypting the content data object; and

thirteenth displaying means for displaying a graphical object representing the content data object, wherein the graphical object indicates that the content
30 data object is embedded within the enveloped data object.

46. The data processing system of claim 26 further

Docket No. AUS990880US1

comprising:

tenth receiving means for receiving a user request to select an encryption key algorithm;

5 third deleting means for deleting an encryption key embedded in the enveloped data object; and

fourth removing means for removing the encryption key from recipient information objects embedded in the enveloped data object.

10 47. A computer program product in a computer-readable medium for use in a data processing system for processing enveloped data objects, the computer program product comprising:

15 first instructions for presenting an enveloped data object; and

second instructions for modifying the enveloped data object through processing of user actions within a graphical user interface.

20 48. The computer program product of claim 47 wherein the enveloped data object is formatted according to PKCS (Private Key Cryptography Standard) standards.

25 49. The computer program product of claim 47 wherein the instructions for presenting the enveloped data object further comprise:

30 , object;
instructions for obtaining an enveloped data object, wherein the enveloped data object comprises a content data object and at least one content encryption key
object;

instructions for determining data objects contained

Docket No. AUS990880US1

- with the enveloped data object;
instructions for displaying the enveloped data object, wherein data objects contained within the enveloped data object are represented by graphical objects;
- instructions for determining logical associations between data objects contained within the enveloped data object; and
- instructions for displaying visual indicators between graphical objects, wherein the visual indicators represent logical associations between data objects contained within the enveloped data object.
50. The computer program product of claim 49 wherein the instructions for modifying the enveloped data object further comprise:
- instructions for selecting a graphical object representing a data object contained within the enveloped data object;
- 20 instructions for displaying data values of the selected data object;
- instructions for editing the data values of the selected data object; and
- 25 instructions for saving the data values of the selected data object in the enveloped data object.
